

## General Purpose Container

General-purpose containers come in two sizes: 20 ft and 40 ft. There are two types of general-purpose containers, one is manufactured from steel and the other from aluminum.

- Steel containers have a slightly larger internal cube.
- Aluminum containers have a slightly larger payload.

Both are suitable for most types of cargo.

	<b>General Purpose 20' x 8' x 8'6"</b>		<b>Steel</b>

## Open Top Container

Open type top containers are manufactured from steel and come in two sizes: 20 ft and 40 ft. They are particularly suitable for bulky cargo such as machinery. These containers are fitted with a PC tarpaulin cover and attachable bows with cable sealing devices. Their doors can be removed to make the stuffing of cargo more convenient.

## Flat Rack Containers

Flat rack containers are manufactured from steel and come in two sizes: 20 ft and 40 ft. They can be collapsible or non-collapsible, with or without walls. They are especially suited to heavy loads or cargo that needs to be loaded from the top or sides such as pipes and machinery.

## High Cube Container

High cube containers are manufactured from steel and aluminum and come in two sizes: 40 ft and 45 ft. High cube containers allow an extra foot in height compared to general-purpose containers. These containers are ideal for light, voluminous cargo or bulky cargo.
